

# Getting Started

This page is a [WIP](#). There are likely to be incomplete and or missing steps while the page is being built.

## Summary

[Install Manager](#) exists with the specific purpose of helping our customers manage the download and installation of products purchased from the [DAZ 3D Store](#). It allows users to easily download and install products, directly from their DAZ 3D account. The products installed with Install Manager can also be easily and quickly uninstalled through the same [User Interface \(UI\)](#). Users can also see which products have been updated since their last download/install.

Using Install Manager means no more trying to hunt down archived installers, or trying to remember if a product was installed or not. No more having to dig through forums or comparing installer versions to see if a product has been updated.

Are you tired of trying to find a product that was installed to some obscure folder? Are you using DAZ Studio [v4.x](#)? Install Manager will automatically create an entry for the name of the product, in the [Content Library](#) Pane. Simply browse the Products > A-Z view and click its name. All of the user-facing files associated with that product will show up, in the pane - ready to use!

With Install Manager, product management has never been easier!

## Process Overview

- [Installing Install Manager](#)
- [Configuring Install Manager](#)
- [Downloading With Install Manager \(WIP\)](#)
- [Installing With Install Manager \(WIP\)](#)
- [Uninstalling With Install Manager \(WIP\)](#)

## Foundation

In order to utilize all of the features in Install Manager, the user must have an active DAZ 3D account and a stable internet connection.

## Wrap-Up

Using Install Manager is simple, but there are a few things you should know before you begin. Be sure to go through each of the sections provided here so you can get a full understanding of the application. Enjoy, and welcome to the world of easier product management.
