

Due to the length of the sleeves for simulation, this gown must be simulated along the time line with additional frames added at the end to allow proper draping of the long sleeves.

Also, depending on the pose we recommend setting the pose and running it along the time line with the Camilla Gown turned off to make sure no arms or hands collide with Genesis 8 Female to prevent an explosion of the dress and limb adjusts can be done before actual dForce simulation .

---

See following images pertaining to frames and the sleeves after simulation, or simulation video included.

Simulated with max frame at 31.

Sleeves need a bit more time to drape properly- Will adjust arms a bit and extend simulation to a total of 60 frames.
