

# Mercury, the planet

Carrara version

By  
Alvin Bemar

This package includes three Mercury planet props in three resolutions: Low, Medium and High, also a probe prop (stylized version of NASA's Messenger), and a Scene with Mercury and the probe.

The Medium and High resolution Mercury props have mesh geometry for details, besides bump maps, whereas Low resolution prop uses only bump maps on a sphere primitive.

The Mercury prop included in the Scene contains a Medium resolution Mercury prop.

The color in Mercury shaders could be in two versions: pseudocolor (enhanced color) or less color (look like to the human eye).

The solar panels of the probe can rotate around its axis. Select the panels node from the probe to rotate it.

Add the folder *Presets/Scenes/Alvin Bemar/Mercury* to the Scenes tab in the Browser Tray, the folder *Presets/Objects/Alvin Bemar/Mercury* to the Objects tab in the Browser Tray, and the *Presets/Shaders/Alvin Bemar/Mercury*
