Parameters Surfaces Tool Settings Render Settings Validator PowerPose

Controls :

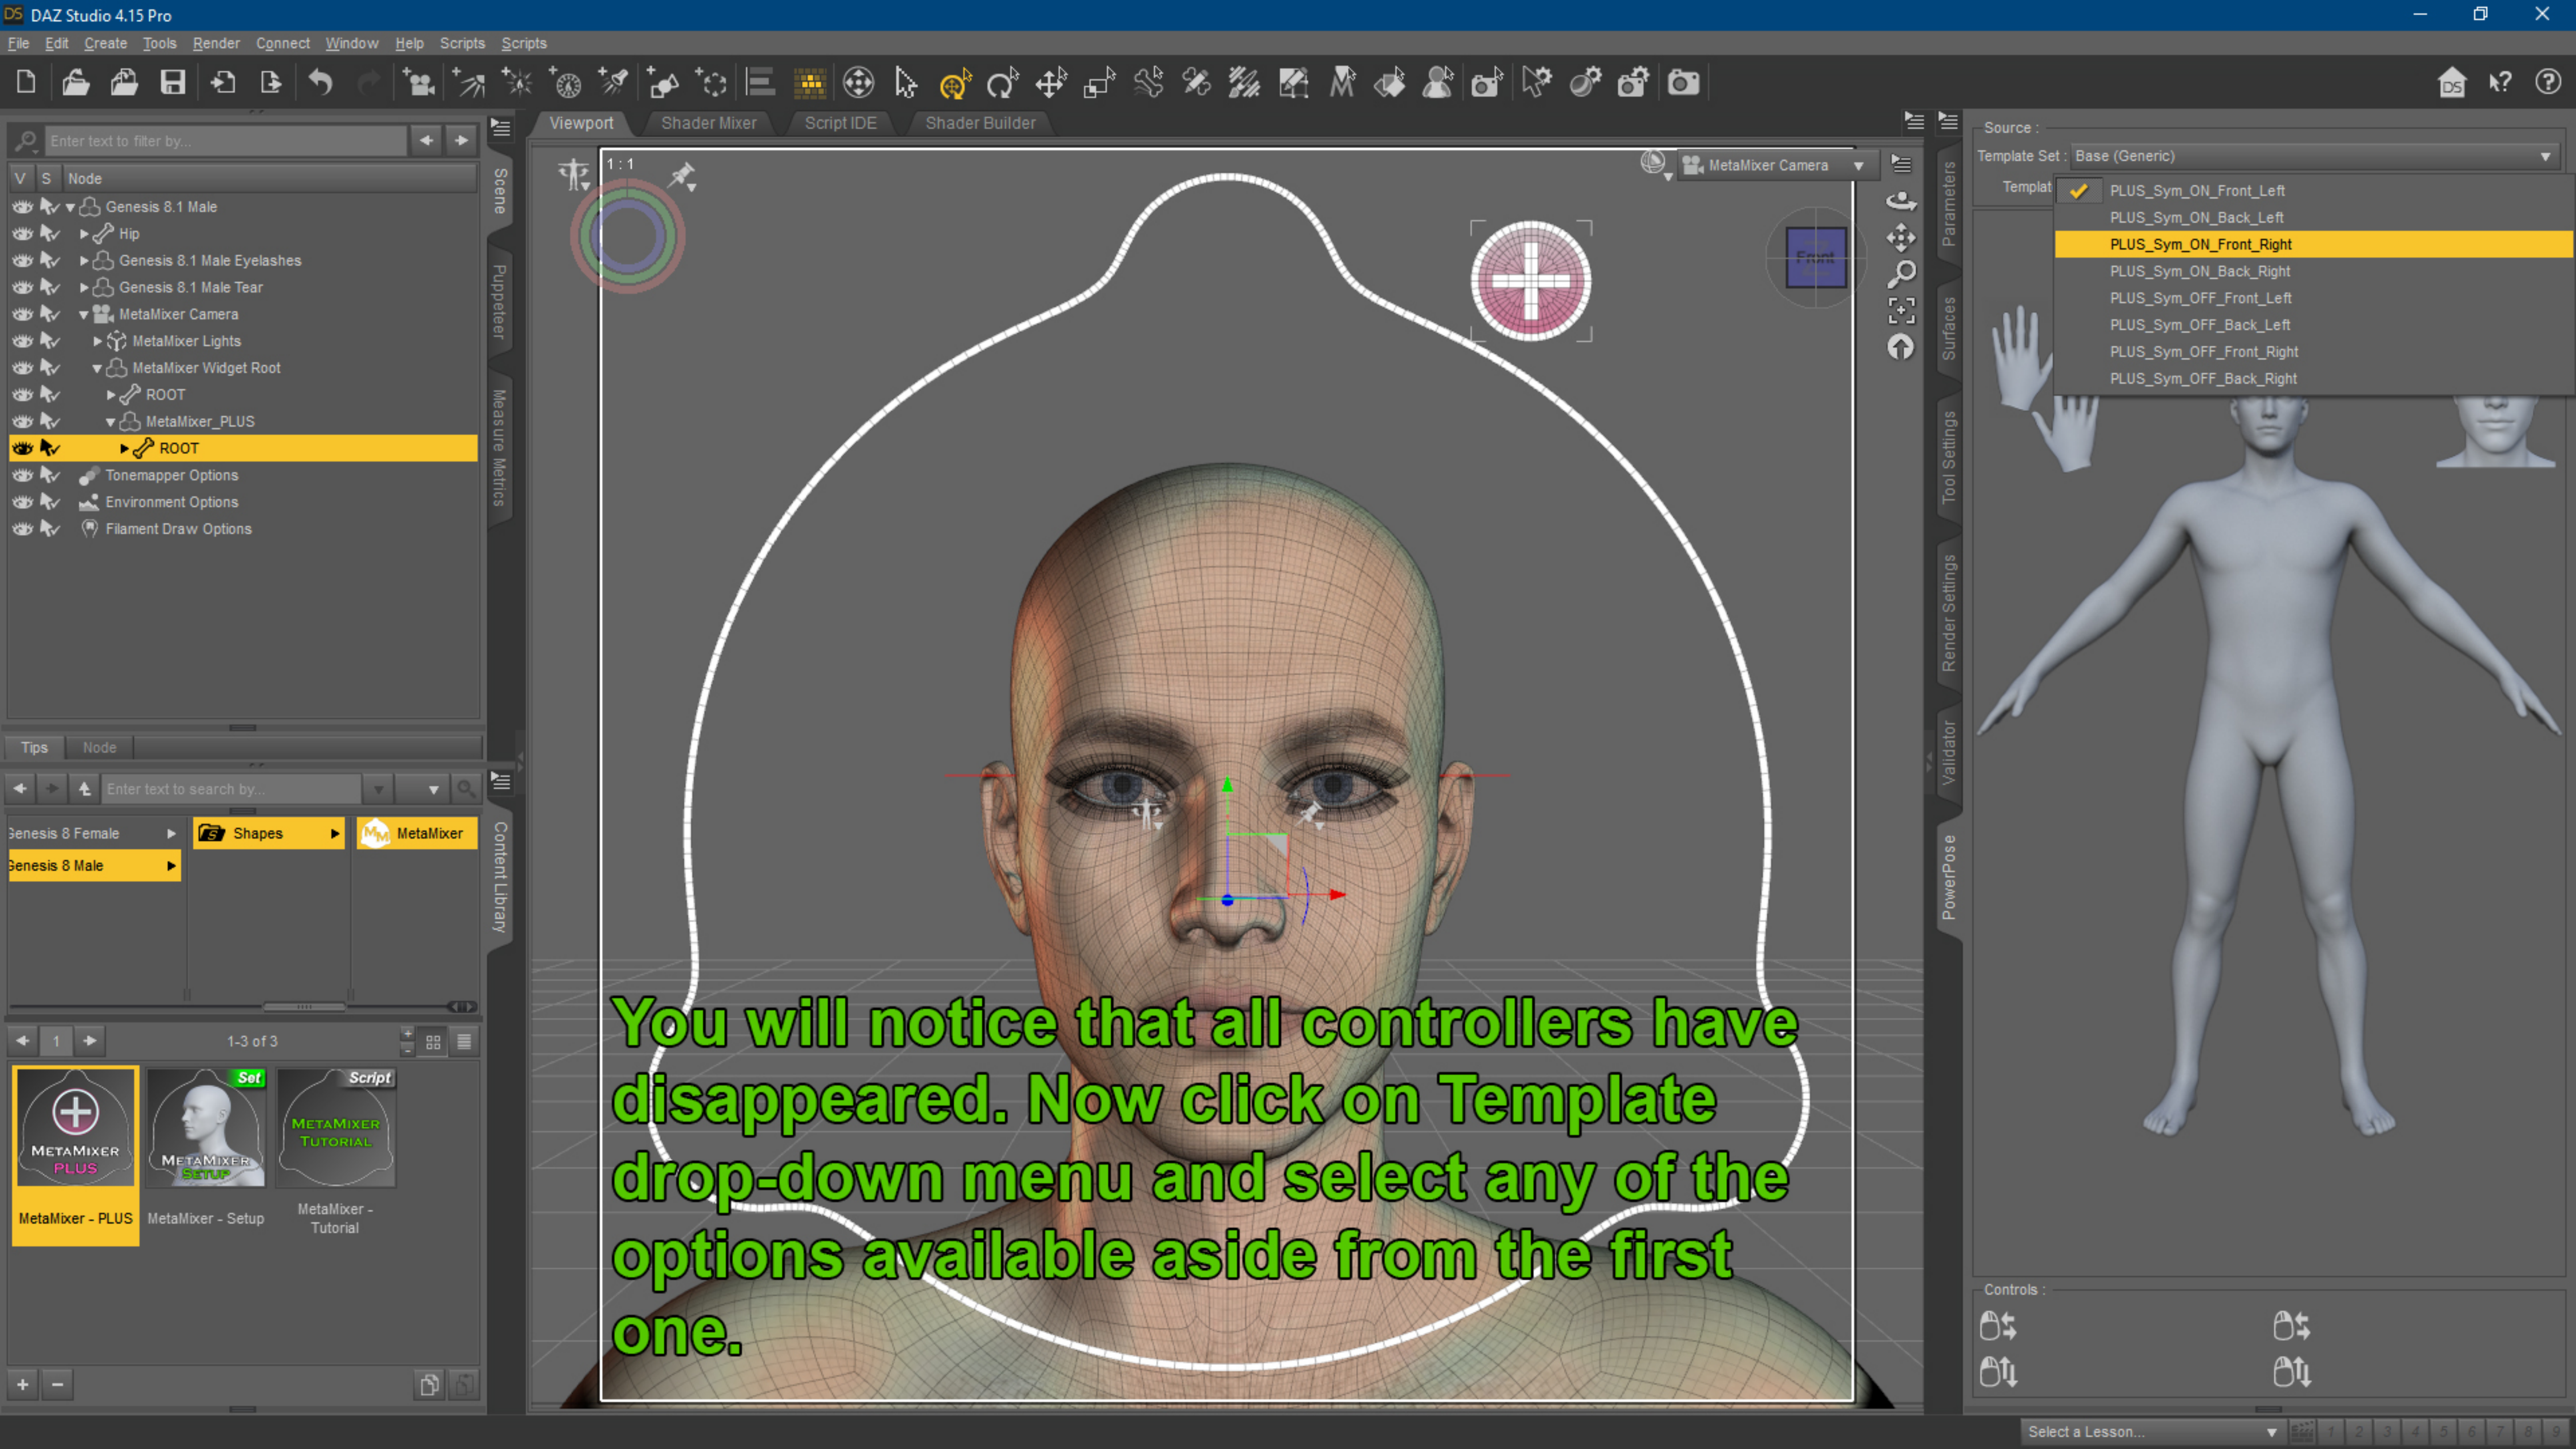

To get a closer look at the face, change your view to MetaMixer Camera.

A small circle with the plus sign should be near the top right corner of the large MetaMixer widget circle. Select it.

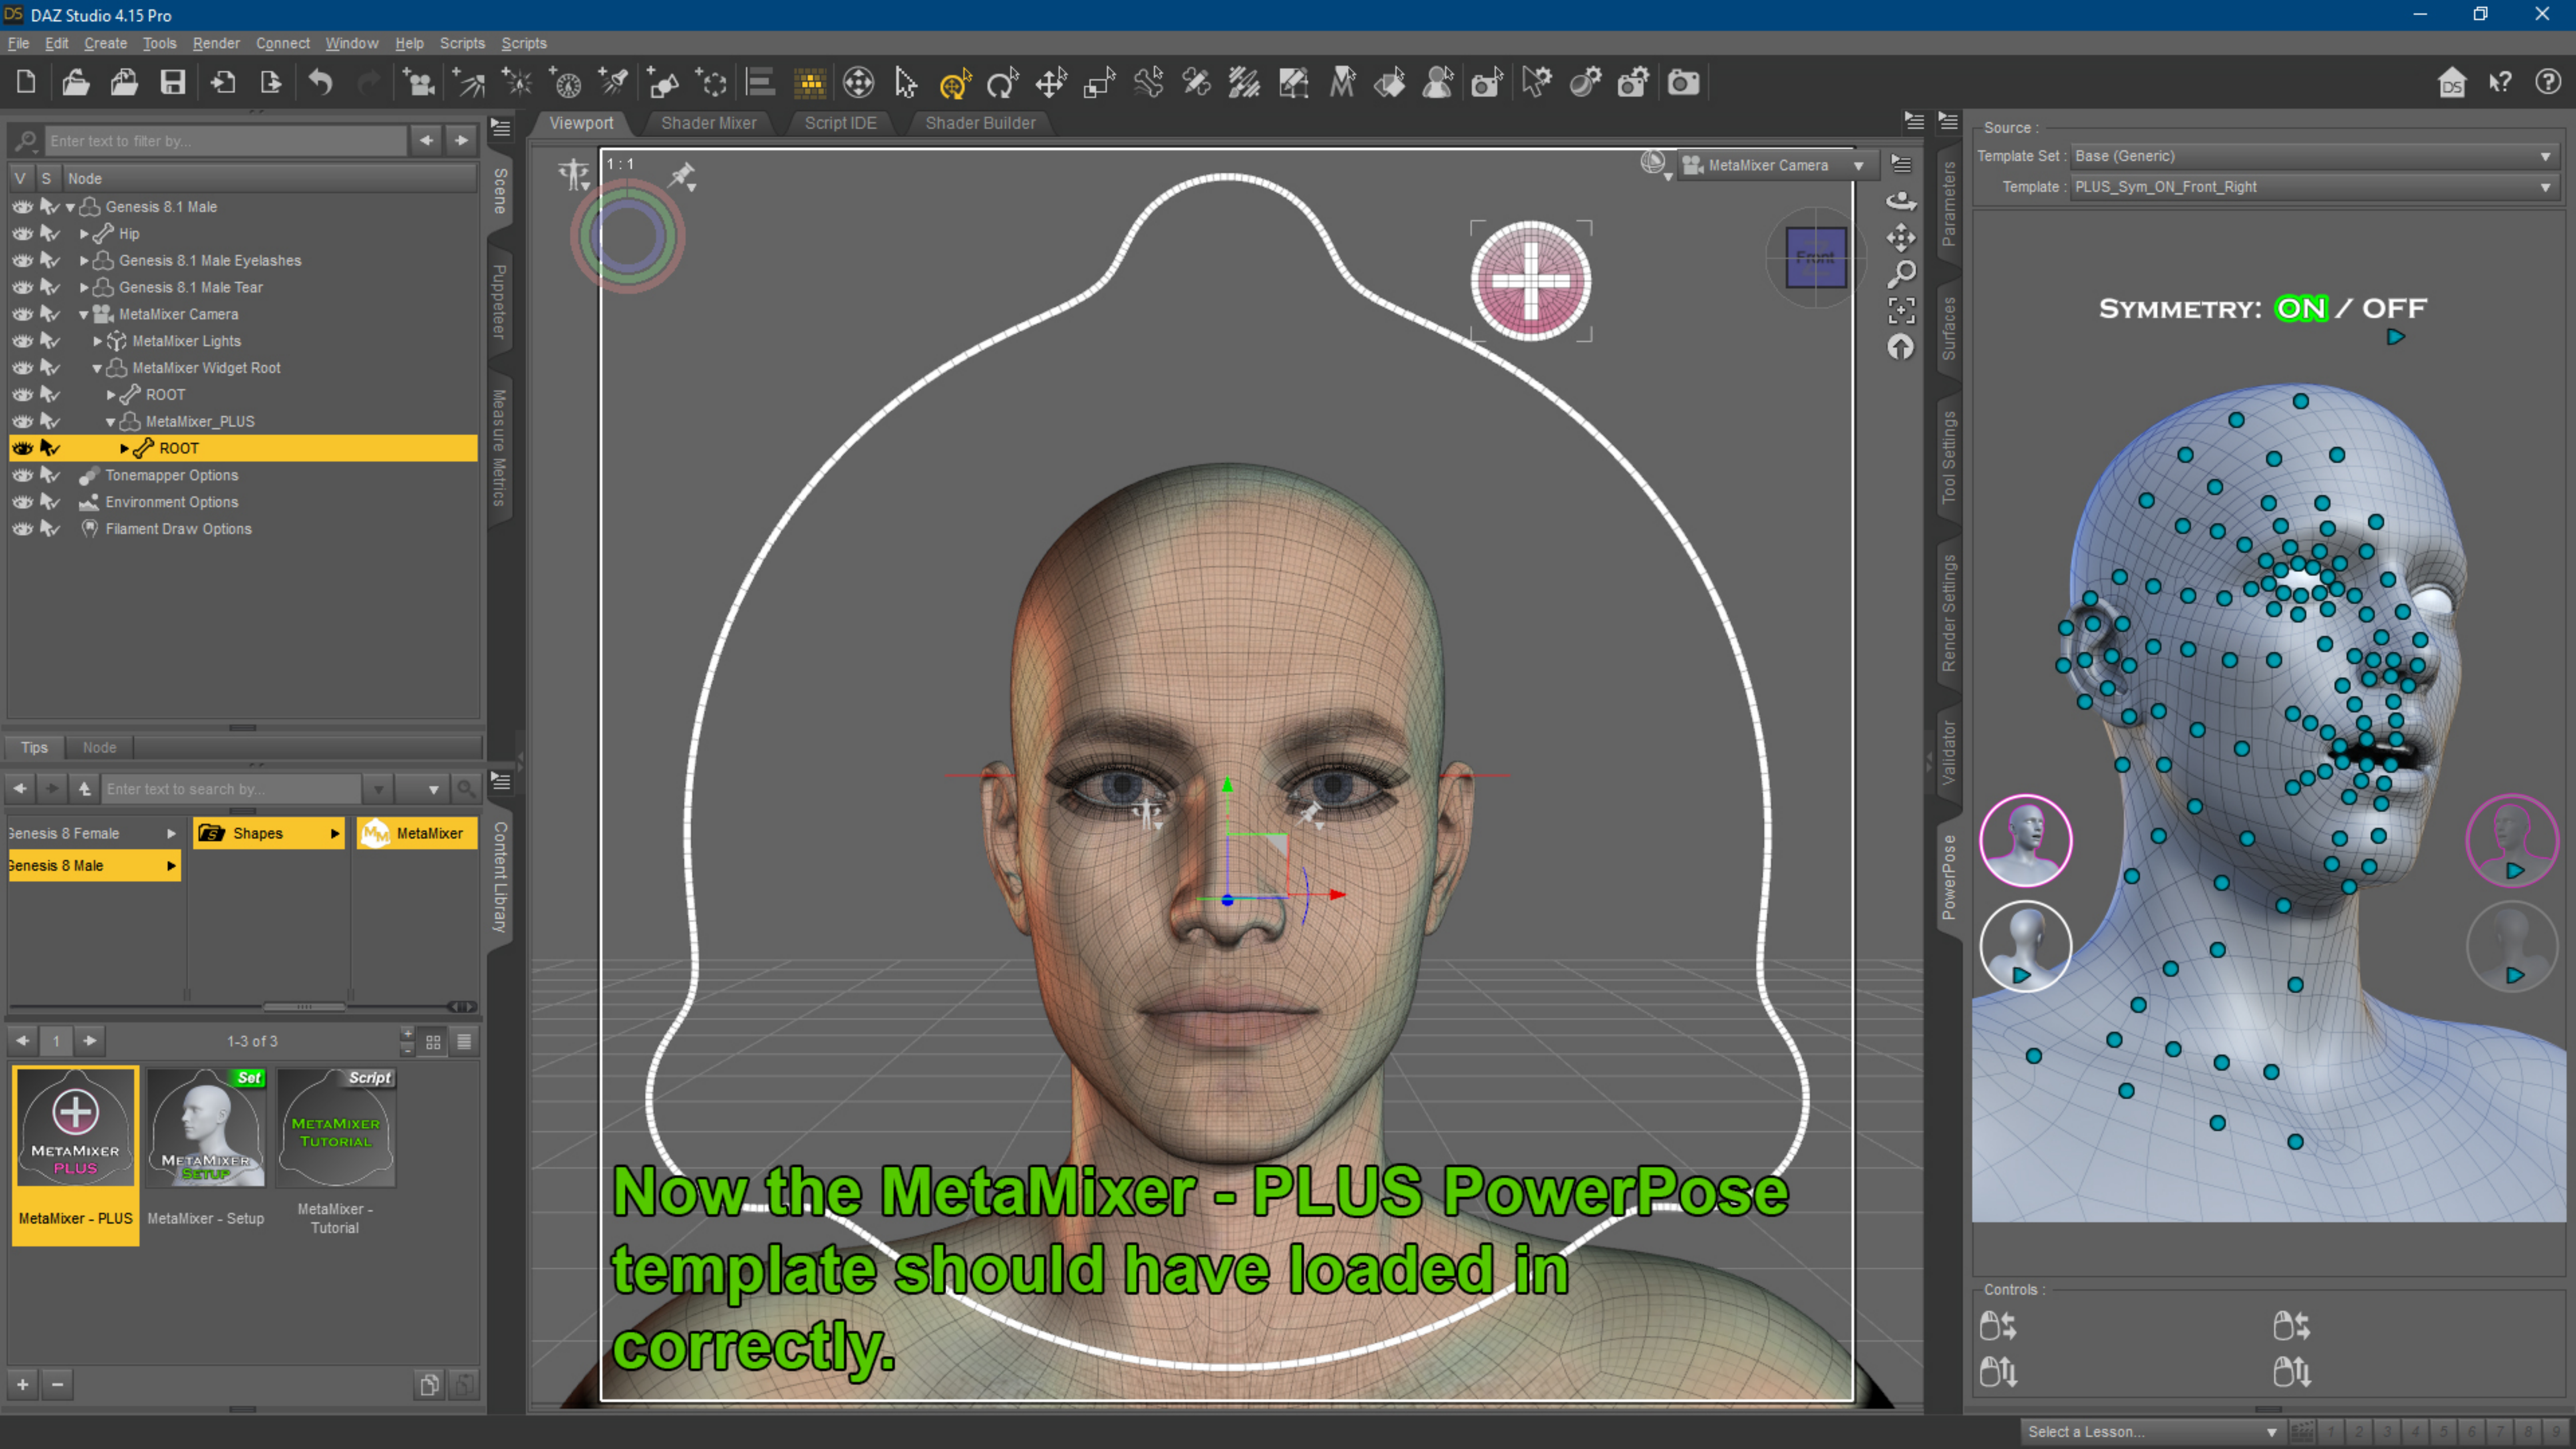

For versions of Daz Studio 4.15 or older the PowerPose templates do not load automatically. To fix this, in the PowerPose tab, click on any of the template controllers (the little blue triangles).

You will notice that all controllers have disappeared. Now click on Template drop-down menu and select any of the options available aside from the first one.

With "Symetry: OFF" only one side of the face will be affected when you drag on a controller.

You can choose which side of the face to work on by clicking on the left/right, front/back templates.
